

Das Manifest Solidarität

"Solidaridad" (1999) - Pepe Noja

THE SOLIDARIOUS MANIFESTO (V 1.8)

Let's Change the Free Competition for Free Solidarity

(Translated by Google)

1. Introduction

1.1 Another World is Possible

Today humanity is hopeless. Economic systems based on money (all) have led us to the brink of unsustainability. If anyone today would make all existing money in specific goods and services would be required of many Earth planets to get it. In this article I propose the only viable alternative that can ensure the survival of humanity, win - finally - the respect of our alien neighbors, colonize the moon and Mars and reach the stars. This system is based on the symbiosis, it needs money to trade (not exchange) and deserves to be called 'Freedom of Solidarity "(as opposed to the current dominant economic system and is called" Competition ")

1.2 The Failure of Monetary Systems

Monetary Systems (Democracy, Socialism, Monarchy, Theocracy, Anarchy, etc..) are based on the existence of money-fiat (money valued by social convention or agreement) and the [debt-money](#) (money backed by future production commitments goods and services, or "slave contracts"), which has led us to the brink of extinction and allowed the emergence of an elite plan to remove all our rights. The first statement ("has led us to the brink of extinction") enough to say that efficiency HATE Monetary Systems. For example, an electric utility is not going to make more money if your users start using eco bulbs and decide to ration their consumption. This is because in a monetary system of this company revenues depend on the kilowatt hours sold and efficiency. In a monetary system all companies need to sell as much as possible to maximize their income. Few realize the obvious consequence of this. If a monetary system all need to sell as much as possible, then drop drawer that all natural resources should be exhausted quickly. Let us thank him for this to the monetary system. The second statement ("led to the emergence of an elite plan to remove all our rights"), few have noticed that there are two sets of laws: one for the elite ("*They*") and another for the slaves (us). For example, it is illegal to trade with money in gross ... unless you're part of the elite (such as a bank or investment company). Everyone should pay taxes ... unless your company is in the Cayman Islands. No community can print your own money ... but someone has to print, right? Etcetera. As he once said Meyer Amschel Rothschild: "*Give me control the money supply and I care not who makes its laws.*" The elite has given us slavery disguised, but due to brain-washing advertising would have us believe that we live in a paradise of freedom. In case you have not noticed, the probability of becoming president of a country without the backing of the elite is zero.

1.3 Redesigning Society

The Economic System of alternative I propose a very simple idea, but life teaches us that simple solutions are the most powerful. Nobody forces you to use money to live, but the monetary systems encourage its use by creating social relations of competition and predation:

- i) Everyone tries to sell goods and services worth more than you (because companies are forced to make a profit)
- ii) If you work in a company is because she "won" the job to others. You won ... but others had to lose (They have designed a system where social life is based on "Zero-Sum Game").
- iii) If you are an entrepreneur, you must:
 - Fighting competition
 - Sell as much as possible (plunder of natural resources)

What if we talk to our friends and together bought a couple of acres to create from scratch a new society based on Symbiotic relationships (Free Solidarity rather than competition)? In this new company re-designed to be symbiotic, synergistic, people are motivated (not required) to be supportive. If someone wants to freely interact in predatory and competitive, it does, but you will be earning more symbiotic. That is, it may discourage the use of money making it unnecessary. **That's the key.**

No matter how utopian it may seem, this system is now being carried out in a secret location in Chile inhabited by awakened humans who believe in solidarity and symbiosis (a place not to be secret because it would destroy the elite through their lawyers). The system I describe here is similar to what occurs in the "Ecological Community of Peñalolén" with the big difference in my proposal that uses technology

(Robotics & Cybernetics) to automate everything, freeing humanity task and routine concerns and primitive and always work at optimum efficiency. It just is not efficient for a human being devoted his life to exploit agricultural land. Undoubtedly, the exploitation works really become efficient when performed by robots. When I say "Robots" Robots do not think like R2D2 and C3PO from Star Wars. A washing machine is a robot (and is more efficient than a human) and an automatic fire alarm is a Robot too (because it is a device that receives data, it makes a decision and issues a response.)

When disasters occur that the elite has been prepared (called alien invasion drama of the fall of a meteorite, end of Mayan Calendar, etc.), The carnage will reach all those people dependent on money (because those papers lack any value) but the inhabitants of the Symbiotic Societies survive as free human beings.

In a predatory society like ours, it was obvious that the United States blame free Iraqis from the [Controlled Demolition of the Twin Towers](#), for the simple reason that they need Iraq's oil (Zero-Sum Game). In a society based on Symbiotic interactions, wars are virtually impossible because of the fact that a country to try to destroy another country B damage instantly to both A and B.

2. The Key

The basic idea behind the new economic model is: replace the Predators by interactions Symbiotic interactions. It's that simple ... and so powerful. If someone wants to be predatory, it is, but that choice in a Symbiotic Society would prove to be little intelligent.

2.1 Definitions previous

To continue with the explanation, we need to clear certain concepts:

i) **Predation:** special interaction where an individual makes Hunter and a dam.

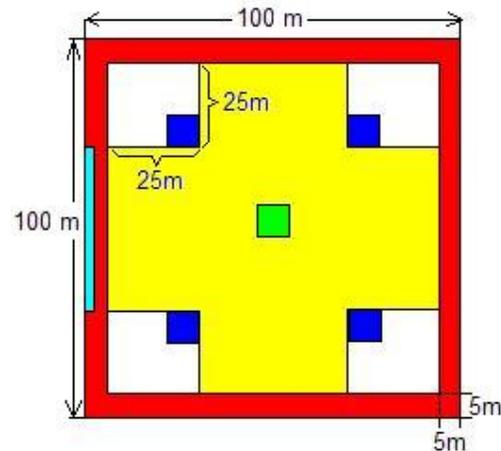

Monetary systems are predators because they are based on fooling the customer (the dam) to get it to buy something for more than it's worth (or not needed). In addition, the nature Monetary Systems prey because they need to exploit natural resources as quickly as possible.

ii) **Parasitism:** an abusive relationship is unbalanced where the parasite achieves the greatest benefit at the expense of the Host. The only humans Parasites are those who choose to be. Even sick people with serious physical handicaps or mental disabilities can be part of the Symbiosis. I show what I mean by this [link](#).

iii) **Symbiosis:** the close relationship between two individuals A and B so that, if A wins, B wins and loses if A, B loses. Here I must clarify that the system I propose is called Free Libre Solidarity and not parasitism. If someone does not want symbiotic balance, then that person must migrate to money corporations because they are more in line with their thinking.

2.2 The Free Solidarity in Action

Let's start with a "Symbiotic Cell." This may correspond to a one hectare square where four homes are located at each corner $10 \times 10 \text{ m}^2$. The total area of each home itself is of $25 \times 25 \text{ m}^2$ (6.25 times per household) and the common ground is the cross that remains after making the distribution of land. The diagram below explains what I just said:

- Perímetro Defensivo (incluye zona de trote y de libre desplazamiento de los animales domésticos)
- Hogares (10x10 m²)
- Zona Privada
- Zona Simbiótica o común (sinergias y producción de excedentes)
- Mercado Simbiótico
- Zona de interacción con las Sociedades Depredadoras (por ejemplo venta de excedentes)

NOTA: los residuos se almacenan subterráneamente con el objetivo de producir biogás

See [Google Traductor](#)

If we can get this self-sufficient and symbiotic cell, then all you need to do to spread the Solidarity free to fill the entire planet is to scale and replicate that cell using "[autopoiesis](#)" as many times as necessary in accordance with the number of people and families who want to join this company formed by Human Beings Cybernetics Awake. Why Monetary Systems do not work? (If you think that work, please! Look around!). One reason is because they accept money by trading with an "interest rate", which leads to the inevitable depletion of natural resources (inability to support the money with tangible products). The other reason is the definition provided Monetary Systems of the term "Family." While "Family" can be defined from different points of view (religious, esoteric, civil, etc.), This is the official definition given the term "Family" Monetary Systems from the economic point of view:
"Family is the smallest unit of consumption (as well as the Companies are the smallest units of production). In Family is how to decide how to spend the money."

That is the key! So Monetary Systems do not work, because separate cells use cell production and use money as an obstacle that restricts access to goods and services! During the Depression Illuminati, 1929, there were still food in the farms and industries could produce anything but the elite used the money and inflation to block access to resources. There was never shortage of resources. What was not was "money-cash." Therefore, for our Cyber Society must work to avoid the artificial separation between production cells and cells of consumption economically redefining the term "family" as follows:

"In a Symbiotic Society, the Family is the basic unit of production and consumption. The families are organized to provide free products in exchange for free are the products of other families. This unconventional business transaction takes place in a Symbiotic Market, where families have their production so that other families take them for free and vice versa. "

Here I must mention the following:

i) This is only the economic definition of family in a Symbiotic Society (does not invalidate the definition is not intended to be religious or esoteric, civil or anything like that)

ii) To give and receive a free, families must produce in excess. To achieve this you should always produce the highest efficiency possible in the world and if someone somewhere is more efficient, then the Symbiotic Society is obliged to use a technology equal to or better than that person. The surplus of production (after having been distributed and consumed internally) can be traded the same way with other Symbiotic Societies (possible "Partners") or Predators Societies to ask them to change things truly valuable (like gold and or diamonds) and no money.

iii) a monetary system measures the scarcity price of a product. If there is efficient so you always have a surplus, then things will lack a market price and without paying Symbiotic take a kilo of fish for domestic consumption will not be stolen.

iv) If you do not need money to trade, then the crime rate will drop to virtually zero.

Note that most crimes are done to obtain money by illegal means.

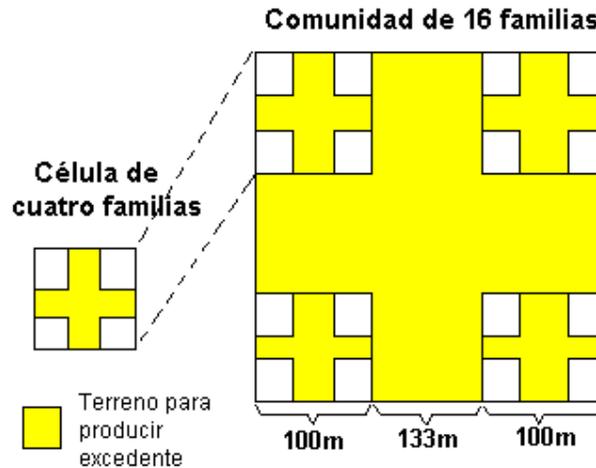

During the transition from Symbiotic Society Monetary Society, accept money only perfectly interchangeable with a valuable product (ie the ticket should read: "Apply for a gram of copper") and obviously is a serious offense to use interest rate because in that case we would be speculating on products not yet exist and whose demand would soar exponentially due to compounding.

NOTE:

The resources and facilities are not perfectly interchangeable. For example: I can not feed copper plates or to breath Speaking classes.

2.2.1 A Symbiotic Cyber Community

As I explained at the beginning of 2.2, the basic economic cell of consumption and production is the Family and this is represented physically by a household which occupies a total area of 25x25 m² private. To have symbiotic social interactions Families need three more. As each home is at the apex of a square of one hectare, there will be a common surface of 5600 m² maximum to produce surpluses. In the interest of efficiency, replication must be autopoietic regular fractal. That is, if four families climbed the Community to 16 families, we get the following:

See [Google Traductor](#)

Likewise, every home should be partially self-sufficient. This means that every home should have its own production for survival, say, for a month. Therefore, every home should have at least own supplies:

- Water
- Energy
- Heat
- Shelter / Physical Well-Being
- Food.

Obviously respecting the freedom and privacy. The way in which each family will implement these five priorities is free, but I note that the best way is through a reverse scaling. That is, consider the original cell and now imagine that represents only a home (in this case the land is 100% private). Before continuing, I should clarify that what we propose is not an ecological community, but Cybernetics (as suggested by Jacques Fresco of [The Venus Project](#)). In an ecological community, its inhabitants replace urban jobs (secretary, cashier, etc.) For rural workers (farmers, ranchers, etc.). In a Community Cyber, Robots are used to automate all production processes and maximize efficiency level possible, so that its people have the option to migrate to professions transcendent and futuristic.

Therefore:

Community Cybernetic = [Ecological Community] + [Last Technology]

I should also note the difference between major and important activities. An important activity may be breathing or feeding. An important activity you could write a book or program a machine. No one would give a Nobel Prize for making a major activity. The opposite can occur with far-reaching activities. The system proposed here is intended that the robots do the work so important for humanity to have time to dream and

transcendental activities (such as software design or colonize Mars.) Does "*homo sapiens*" is not "*wise man*"? In a Symbiotic Society, humanity will have more leisure time, we play sports more often and therefore will be more healthy.

Possibly the most common profession in a Symbiotic Society is Maestro (Dance, Martial Arts, Design Software, Speech, Solidarity Ecosystem Management, etc.). The "payment" for these services will be stored in a "Time Bank" (I'll explain). On people with severe disabilities, if the disability is physical, not mental, they can work as teachers. If the disability is mental, not physical, they can work doing important tasks (such as cultivating the land). If the disability is both mentally and physically, then that person obviously needs our support, solidarity and compassion and no one can say you can not access the existing best medicine because of lack of money (Symbiotic Government, as representative of the solidarity of the community, bear the "costs"). More details in Section 4.

2.2.2. The Five Basic Needs.

Below I will explain how a Symbiotic Society meets five basic needs, namely: Energy, Heat, Water, Shelter and Food.

2.2.2.1 Energy: Racing with the electricity bill.

Each family is reflected by the fact of occupying a certain area (in our initial example, the total area is privately 30x30m²). In a monetary society that area is wasted. In a symbiotic society, every wall is lined with solar cells. The energy requirements of a home media symbiosis can be 2500 Watts (about 25 tungsten bulbs lit at the same time.) If this value is not achieved with solar panels, then the missing energy can be achieved easily with wind turbines. It should be noted that currently there are economic models 1 KW wind turbines, which cost just USD 1000. There are also courses on the internet USD 30 such as "Do it yourself" and they teach how to build hybrid wind / solar from waste materials. For the price of energy is zero (abundance and not scarcity) in the common area of the cell Symbiotic should install a hybrid solar / wind energy to meet the needs of peaks times and have surplus to trade with other societies.

2.2.2.2 Heat: Goodbye Gas account.

Every home should have insulated walls, rubber seals and thermal double-glazing systems that minimize power drain. Depending on needs, the exterior of a home can change their reflectivity or absorbance index with the simple act of changing the color (for example, at high latitudes that the outside should be permanently black). The interior can have a robot that measures the temperature and you choose to provide or to expel heat, which can be produced from gas sources owned by the Community. Where do you get that free gas? If the Community is not lucky enough to own their own gas reserves (as done in Magallanes) that gas can be "biogas (gas from the anaerobic biodegradation of organic waste). This alternative is always possible to implement given that human beings are always going to produce organic waste. Moreover, the Internet is rife with economic courses that teach how to produce biogas. Clearly, if the heat supply has a zero price (abundance and not scarcity) in the center of the Symbiotic cell must have a biogas plant located above the underground area intended to act as Landfill and adjacent to the Waste Recycling Plant and Incinerator. That which can not be recycled must be incinerated and buried and the heat resulting from the process can

be used to boil water and drive a turbine capable of producing hydraulic power (the excess can be stored in a battery bank and / or may be Predators trade with Communities).

2.2.2.3 Goodbye Water Account.

If the Community does not have the luck to be next to a river or fresh water (surface or underground), every home should have rainwater-harvesting pits. Then, a mechanical pump should suck the water, sediment should be removed and decontaminated, and finally distributed to the respective outlets (pipes, showers, toilets, etc.). Obviously for the price of water is zero, the center of the Symbiotic cell must also have an underground pool to store rainwater.

2.2.2.4 Shelter and physical well-being.

Each home (100% private) should be replicated fractal structure Symbiotic Cell, have a minimum range of one month and have an underground shelter connected to the underground shelters for at least three other families. In addition, each family must decide freely how to meet the five basic needs (for example, instead of using a hybrid energy system solar / wind, the family can have a private gym where the movement of machinery used to produce electricity which then is stored in a battery bank).

Here we must note that the Seven Principles to accept those who voluntarily choose to live in symbiotic community are:

- i) Freedom
- ii) Privacy (Those who sacrifice privacy in the name of freedom, deserve neither the one nor the other.)
- iii) Efficiency (If someone is more efficient than us, then we are obliged to at least match it).
- iv) encourage (not require) the symbiotic interactions (or, in the worst case, we encourage neutral interactions).
- v) Cybernation (if you can make a robot, then you must make a robot)
- vi) avoiding the corruption and the existence of an elite by Symbiotic Government (see Section 5).
- vii) The criminals pay their debt to society doing important work (not paid debts with the company as a parasite living inside the prison)

2.2.2.5 Food

This is not the place to show that being vegan is at least twenty times more efficient than being an omnivore or carnivore (see what [Peter Singer said about](#)). Also, be voluntarily Vegan is surely a sign of a higher state of consciousness because it stems from our commitment to efficiency, the symbiosis between all species and the love and compassion for all beings able to distinguish between pleasure and suffering. Like most living humans has been educated by the system to ignore animal suffering, I propose the following no radical diet:

- i) Plants (fruits, vegetables, legumes, seaweed, etc.).
- ii) Eggs
- iii) Milk
- iv) Fish
- v) Seafood

That is, at most it causes suffering to the fish and shellfish (and not our closest relatives such as cows, chickens and pigs). In the case of milk (cow, donkey, goat, etc.) Interaction is symbiotic: the animal will feed us and in return receive our protection (food, shelter and free movement across areas). In the case of eggs (chicken, quail, duck, ostrich, etc.) Will be the same situation symbiotic (eggs in exchange for food, shelter and free movement). If the Community does not have the good fortune of being located by the sea, fish and shellfish to breed in pools automated located in the center of Symbiotic Cell. The first item (plant) efficiency is tilted toward the greenhouses, hydroponics and growing vertical. Ie arable land can be increased significantly (and have surplus) if used towers, multi-storey greenhouse, where each floor should have a couple of inches of compost or mineral solutions (here we see a symbiotic interaction with worms).

Jacques Fresco / www.theprojectvenus.com

2.2.2.6 Who Needs Money?

I show that a society can organize and supply symbiotically their five basic needs without using money. But what about the products manufactured as a computer or a car? A typical family can not spare time for activities far-reaching if we give the mission to build cars for the rest of the Community. It's true. A typical family can not do ... but many families working symbiotically own team! A family can take care of just automating the production of screws. Another family can take care of just automating the production of wire ropes, etc.. And in the center of the cell Symbiotic can be performed more complex tasks such as assembly and quality control (via robots). This is how we can produce any product manufactured with a zero price (free we change components and receive free product assembly). Inevitably some manufactured products will be scarce due to the number of families available in a Symbiotic Society realistic (if the whole planet was symbiotic, then nothing would be rare). Those few products can be purchased from other symbiotic community, or from Communities Predators, and store them in a "Library of Manufactured Products." Let me explain. If I have a car, that car do not use it 24 hours a day. If I have a Video Camera, Video Camera that I do not use 24 hours a day. Etcetera. The possession of these products is not usually efficient. Rather, it is extremely inefficient to have a car which usually travel a couple of hours a day only one person (the driver), being normally fit five people. Likewise, it is

extremely inefficient to have a Video Camera and use it only a couple of times a year in special circumstances such as marriage or a birthday. Therefore, these products can be stored in a "library" and granted free of charge for temporary use, just as with the books of a public library.

After I explained everything, tell me: Do you really need the money? Are we going to continue to allow a gang of psychopaths who offers oil for blood to continue making money appear out of nowhere when you print or digital on a computer just because the law (they invented themselves) allow it?

3. How to end poverty by "LogoNet", the Solidarity Internet.

Imagine first an efficient network of computers that transmit using the http protocol hypertext or other better. For the network to be efficient we get at least the same as today get Internet, but free (or almost free). Therefore, this network of computers may be based on Linux (stable, fast, open source, based on the philosophy of solidarity and provided free of charge). This new network will be called "LogoNet" and the Internet will be very different because it manufactures to download free. Yes, I said "download". Imagine a poor person who needs a bottle for your baby. To purchase this product at zero cost, all you have to do is connect to Logonet and download. But how can download a manufactured product? Here's the explanation:

Any product manufactured (a spoon, a sculpture, a desk, etc..) Is simply a solid matrix of information. Solid matrix of information that can specify the type AutoCAD WYSIWYG programs by contour lines. All members of the symbiotic community will know how to draw contours of her creations and free rise Logonet by the mere pleasure of it (for this to be efficient, the contour must be specified modularly designed objects). Then when someone needs a certain product, the person enters the search pattern in the search Logonet and see the photos available until it finds a product that is to your liking. Then that person downloads the contours of a "[Replicator](#)" (or three-dimensional printer) and the machine prints using polymers the object in question. A replicator is nothing futuristic or science fiction. It is simply a printer-like machine that interprets the contours and reconstructs the object using heated polymers instead of using the typical inks. If each Community Symbiotic have at least one replicator, we could end poverty quickly. I note that poverty is not lack of money, but of resources.

4. Symbiotic Professions and the Time Bank.

Imagine that someone needs therapy with the psychologist, Archery classes or Legal. How do you meet such needs in a Symbiotic Society?

To receive, you must first give. Imagine that a person named Paul Logonet publishes its services and wait for someone else, we'll call John, the demand (of course the main consumer of services essential issues will be the Government Symbiotic). After giving their services, Paul must collect them and it connects to Logonet and John transferred his "**Solidarious**" from Paul's account, specifying the reason for the transfer (eg: 2 hours of computer classes). *Solidarious* is a time-weighted unit used to measure how much each has contributed to the Company. The global database that stores this information is called "Time Bank." Just as each person is free to charge whatever they want for their Services, likewise each person is free to choose the service provider to your budget. To avoid inflation and speculation, the Government Symbiotic always use the following reference table to pay the salaries of gubernamental employees:

* Standard Service Master: 500 Solidarious / hour

* Standard of Medical Service: 1000 Solidarious / hour

Obviously, a Senior Professional may charge more.

Any other services will be assessed according to these two reference points. For example, the social value of a standard engineer is usually higher than that of a teacher and less than that of a doctor.

Continuing the story of Paul, now Paul has a number of Solidarious in your account, why can search Logonet professional needs, claim their services and pay just as John was paid (by transferring to Solidarious Logonet through).

The Solidarious is different from the money due to the following rules used by the Bank of Time:

i) There is no interest rate

ii) The Solidarious alone can create out of nothing is the Government Symbiotic (It's created every time you pay the services of its citizens).

iii) The Solidarious transactions have a tax equals to zero.

iv) It is legal to transfer Solidarious for nothing (for example, a parent can transfer the account Solidarious your child when your child needs emergency surgery.)

v) The Time Bank may declare void certain transactions (for example, is very suspicious to provide 500 hours of service in a month).

vi) The Solidarious only serve to compromise services (not convertible into tangible products).

The first two rules just deserve to be commented. If those rules did not exist, then we would still have an elite group of bankers that instead of enslave humanity with euros or dollars, now they do with Solidarious. The third, fourth and fifth rules are self-explanatory. The sixth rule because it deserves a detailed explanation in monetary economies appears to be normal otherwise.

Humanity is on the brink of extinction because the monetary system does not respect the sixth rule. The services are growing much faster than natural resources, so that if we accept the equivalence between services and goods, the result is the rapid depletion of natural resources. When someone goes to the bank today to request a loan, the Bank will require security. Is the guarantee of what type it is: something material (like a car or a building) or service ("100 hours of dance classes")? Banks obviously require some material. So even the same banks (the core of the Monetary System) will be disguising the sixth rule: the services must not be convertible into goods.

NOTE:

Any intellectual development (an algorithm, an e-book, etc.) Is considered a service. Books printed on recycled paper, bleached without chlorine and printed with nontoxic inks will also be considered and may compromise services in Solidarious Symbionese Government needs educated citizens).

5. The Symbiotic System of Government

There is nothing more corrupt than the Monetary Policy Systems. There is nothing more inefficient than the Monetary Policy Systems. Nothing is more wasteful of resources than the Monetary Policy Systems. In this regard I have a personal example. In my country there is a call Avenida Pedro de Valdivia and measuring more than seven miles. Every utility pole is separated about ten meters apart. Well, during political campaigns

and every one of the poles of Avenida Pedro de Valdivia appear covered with political advertising, most of which is funded by future losers. And where will these advertisements? IN THE GARBAGE. When I see all that I can only think of one thing: SIZE RESOURCES WASTEFUL.

The Monetary Policy System has the following serious shortcomings that make it obsolete in a futuristic society:

- i) Maximum inefficiency (eg large political class and performing work in private enterprise could be undertaken by a group of ten times smaller)
- ii) Corruption maximum (eg, influence peddling). If this were not true, then nobody would be the political party of the President.
- iii) high resource wastage (eg political advertising that ends in the trash and whose final destination is paid for with taxpayers' money)
- iv) Maximum Lie to get the votes of the masses (eg, [Obama](#))
- v) polarization of society through political parties "oppo-same" (they look like opposites, but they are the same.) From the point of view of International Bankers do not care about the governance system of a country because that country will always need money.
- vi) This system is designed so that under normal conditions is virtually impossible for citizens like you and I get to the presidency of the Republic (eg by not having seventy million dollars is impossible for anyone to register his candidacy in the Electoral Service | [View more](#))

How to avoid these things? In the background we must ask is: Do we want a good government or [Policy-Showbiz](#) Monetary Systems? In light of what I have should be clear that you can not have both. Political parties are companies that sell ideals and have a brand identity that people recognize (the ideals of the "Middle Class", the ideals of Operators, etc.). Marketing campaigns conducted by the same companies that promote condoms or detergents, Political Parties deify human beings have the approval of the elite and to brainwash the masses so that people think they are the leaders (but if knew the true path of life of those supposed leaders, nor drunkards would vote for them). Finally, when these leaders come to power, they forget all their promises and they start to obey the orders of their true patterns (those that financed their political campaigns.) The political leaders of the monetary system does not work for people. They work for the small elite that controls them and who paid his political campaigns.
Really, not worth it to continue to defend a system with widespread metastasis.

The system I am about to expose government is totally virtuous because it relies on the symbiosis. Recall the definition of symbiosis: the close relationship between two individuals A and B so if A wins, B wins and loses if A, B loses. Side effect: a Symbiotic System of Government Leaders ought not to be corrupt, because doing so would damage themselves. Then Symbiotic governance system has the following characteristics:

- i) It is extremely efficient
- ii) Corruption is virtually nil
- iii) The waste of resources is virtually nonexistent
- iv) The Political speak the truth
- v) The Company is not polarized (because it Symbiotic)
- vi) Anyone can become President (and probably is at least once)

Then I describe the Symbiotic System of Government.

5.1 The Candidates

First, each family freely only one candidate nominated for only one of three political positions: Executive (Chairman), Legislative or Judicial. To avoid the emergence of an elite, it is mandatory that each family submit a candidate. The prestige of the family is at stake, so this ensures that each family submit your best card (if they apply a bad candidate, will harm both others and themselves). I note that if a family is Socialist, theocratic or whatever, may nominate a candidate according to their convictions. Perfect. So be it.

The candidate must:

- i) Being an adult (eg 18 years)
- ii) Not have been sentenced to a distressing
- iii) Have been nominated by his family (in an [Economy of Resources](#), each home has a Family)
- iv) Ability to read and write
- v) Learn to add, subtract, multiply and divide
- vi) Have passed a 30-hour free course on Managing Symbiotic Communities
- vii) Certify that does not belong to a secret society (because otherwise, loyalty is with the Secret Society and not to the Community). A Secret Society longer when Logonet

published in the list of members, activists, supporters, initiated or whatever it was called.

5.2 The Election

Did the President what it is: the First Public Servant or Leader who must be obeyed? Unlike Monetary Systems, a Symbiotic Community President is the First Public Servant. Therefore, it does not matter who wins the election because the candidates applying for the three political office not for love of power, but to ensure that the symbiotic systems work. Furthermore I said: "Anyone can become President (and probably is at least once)." Therefore, the choice is ... RANDOM. Yes! You read that right! Just as you decide the winner of the Lottery or ONCE, and also determines who will occupy the three political office. I note that when I say that it is likely that anyone will ever be President at least once in their life, what I really mean is that the probability of becoming President in a Symbiotic Society is thousands of times become so in a monetary society.

Corruption is minimized by considering the following points:

- i) Each candidate was nominated by his family. If you do things wrong, stain the name of your family and it can not participate in the upcoming election (the number of times that this family can not participate will depend on the type of error or offense committed by his nominee)
- ii) The tenure is short: for a small community (like Peñalolén Ecological Community) suggest a month. For a large Community (as a country) suggest a year.
- iii) It is prohibited immediate reelection (sometimes by chance we make jokes). Those already Political leaders can not participate in the election immediately following.
- iv) The new political leaders to take office should conduct an audit immediately preceding the Political Leaders.

5.3 Assumption of office

The three winners of the draw will be the Leaders of each of the three branches and their work will make the symbiotic systems work, considering the required criteria for efficiency and effectiveness. The first two tasks to perform after taking office are:

- i) Contract from LogoNet services assistants, Ministers and / or Public Employees (if desirable, may be the Leaders Political and / or Public Employees above). Obviously the salary of the assistants must be specified in "Solidarious."
- ii) Conduct an Audit immediately preceding the Political Leaders.

5.4 Work and Responsibilities

As we know, the work of the three political leaders is to make the symbiotic systems work. Transparency is very important, reason why each and every one of the decisions taken by political leaders will be published in Logonet. In addition, assistants or employees Attorneys only accountable to their line managers in accordance with the structure of each organization.

5.4.1 Judiciary

The work of the Leader of the judiciary is to ensure that laws are properly implemented and make final decisions in certain special trials. Note that the number of prosecutions will be reduced by at least factor 10, since in the absence of money will decrease crime

rates to virtually zero. On the other hand, the Court may become far more efficient if the statements are used for [brain scans](#) that can monitor the activity of brain areas responsible for the development of lies.

5.4.2 Executive

The work of the Chairman up to represent the will of the Symbiotic Society by signing contracts, treaties and negotiations. It is also responsible for making progress to Symbiotic Society by suggesting innovative projects. You can also "collect taxes" (not scared) calling for participation in the Community Lottery, where each person who wishes to participate may acquire free numbers offering money in exchange Predators Communities or truly valuable things (such as copper plates and jewelry) and allow the Company Symbiotic Companies do business with Predators (for example, requesting the construction of an airport to a firm monetary Society). More than material things, I suggest circumvent public services (courses, 10 hours in a spa, etc.).

The President may declare war only in the following three cases:

- i) As a defense against an attack made against the Community
- ii) As a defense against an attack made against its Allies (the character of "Allie" is specified by a public Treaty)
- iii) If the other company does not comply with his word stipulated in a treaty or agreement.

Note that:

- i) There is the farce of "preventive wars"
- ii) For small communities should substitute "declare war" to "file suit," which may include acts of repudiation and peaceful protests "hostile territory."

5.4.3 Legislature

The work of the Leader of the Legislature to direct the drafting of laws or rules that encourage symbiotic interactions, considering the maxim that says: "The more laws, less justice" (efficiency always at the front). This can be achieved by redesigning the company so as to motivate the right behavior. For example, instead of prohibiting driving while intoxicated (an adult not really need it in writing for evidence that such behavior is wrong), what you can do is build cars that require the breath to activate the motor. If the potential driver fails the breath, then the car just will not leave. Also, if "n" laws are derived from the same logical principle, then legislators should consider only the basic principle to avoid legislating n times on the same thing (the n laws become examples of the first n base). The Leader of the Legislature may also repeal laws that have become obsolete and promote the writing of new laws.

I note that in a Symbiotic Society (which is governed by the efficiency and effectiveness) Public Procedures Manual is considered a guarantee Act because those manuals and do not produce in abundance to scarcity.

6. Conclusion

It is preparing the final catastrophe, and unlike 1929, this time the disaster will affect the whole world today because the economy is truly global. When this happens, stay with us with money, worthless paper, while the Great International Bankers are left with really valuable things (such as arable land and real estate) to enforce the debt guarantees. The only way to save and to prevent the removal of all our rights is to

organize symbiotically now. In the movie "The Day the Earth Stood Still", a scientist explained the alien Klaatu that humanity needs to be on the brink to wake up and change. I should correct that: stupid humanity needs to be asleep on the brink to change, but the fraction of intelligent humanity can awake to take action before disasters occur and avoid suffering. Organize your neighbors and loved ones to form symbiotic community. It need not be perfect (need not be 100% symbiotic), but the closer the Solidarity free, less suffering you will experience when disasters occur that the elite are preparing. When your young children come to you asking for bread and you realize that your money is not redeemable for anything, remember the warning that I made today. Avoid this pathetic scene to adhere to the Free Solidarity and thereby demonstrating that you are part of the solution not the problem.
